

Checklist for Writing Steps

- [Watch \(Video Script\)](#)
- [Read](#)
- [Download](#)
- [Practice Quiz](#)
- [Challenges](#)
- [Practice Exercises](#)

This checklist is meant to help the Curriculum Team check their work to ensure they are following instructional design, style, and Skillcrush best practices.

[Watch \(Video Script\)](#)

- ☐ Script has an engaging intro and outro
- ☐ Content matches the outline and lesson learning outcomes and goals, and doesn't have information outside of that.
- ☐ Explain what the lesson/video covers and then why we're teaching this/why it's important before we get into the "how"
- ☐ Concepts in the script at an appropriate introductory level
- ☐ The script follows a logical flow - everything feels in order
- ☐ For coding classes, any code examples are tied to a real-life application (never `b=2`, but rather `credit_card_balance = 50`), and *also* don't use the class example.
- ☐ The script provides students enough support to complete the challenges.
- ☐ SFX and GFX cues are clearly but concisely noted in brackets.
- ☐ The content matches the Skillcrush "voice" & AP style guide
- ☐ Writing is clean with no extra words, written in active voice
- ☐ There are no/minimal grammatical mistakes
- ☐ The script has been read out loud to ensure content sounds natural and easy to read.

[Read](#)

- ☐ The content matches the outline and lesson learning outcomes and goals and doesn't have information outside of that.
- ☐ Read step and script align, in terms of how terms are defined and what's introduced
- ☐ There's an engaging intro that informs students about the content.
- ☐ Read step explains what's covered in the lesson and then why we're teaching this/why it's important before getting into the "how."
- ☐ Read step provides students enough support to complete the challenges.
- ☐ For coding classes, any code examples are tied to a real-life application (never `b=2`, but rather `credit_card_balance = 50`).
- ☐ Covers all the skills to a sufficient degree, so students will be set up for success in the challenges and assessment
- ☐ Graphics are sourced and in Images & Gifs folder (or *direct* link to an image is added).
- ☐ Graphics are used to show, instead of telling.
- ☐ Graphics and gifs have alt text.
- ☐ Text is broken up with clear headings and subheadings, as needed
- ☐ If any previously introduced content is referenced, a comment is made for the class loader to link the content.
- ☐ Writing is clean with no extra words, written in an active voice.
- ☐ The content matches the Skillcrush "voice" & AP style guide.
- ☐ For Lesson 1 in a new class, there's a section that explains the class project.
- ☐ The step has been checked thoroughly for grammatical mistakes.

[Download](#)

- ☐ A brief description frames the purpose of the document.
- ☐ Link to the editable worksheet.
- ☐ Link to the copy version of the worksheet: `/copy`
- ☐ Link to the PDF version of the worksheet: `/export?format=pdf`

- ☐ Headings linked in the document.
- ☐ The document name is updated in the footer.
- ☐ Code examples are formatted.

[Practice Quiz](#)

- ☐ Quiz questions are open-book. Students should be able to answer them if they paid attention to watch/read steps.
- ☐ Every question has an answer identified
- ☐ Definitions align directly to watch/read steps
- ☐ Each multiple-choice question has three or more options
- ☐ There are no periods at the ends of the answer options
- ☐ There are 6-10 questions (whatever you chose for the class)
- ☐ The step has been checked thoroughly for grammatical mistakes.

[Challenges](#)

- ☐ A framing section appears at the top of the page to tell students what they'll do in the challenge.
- ☐ If any previously introduced content is referenced, a comment is made for the class loader to link the content.
- ☐ Images and gifs have alt text in a comment for the course loader (e.g., alt = After the button is pressed, a message appears in the console).
- ☐ If needed, an example is provided that is just different enough (e.g. a different client/project) to help students but not hand-hold
- ☐ All skills/knowledge needed for the challenge is clearly laid out in the Read step.
- ☐ For coding classes, solution code is provided.
- ☐ The step has been checked thoroughly for grammatical mistakes.
- ☐ Code examples are formatted.
- ☐ Subheadings are added inside the What To Do section to help students with pacing and so they understand what's expected of them.

[Practice Exercises](#)

- ☐ Each exercise has a Skill Practiced section.
- ☐ Starter and solution code included, if applicable.
- ☐ Code examples are formatted.
- ☐ Brief framing for what the exercise is/what the students will produce.
- ☐ Relevant images and gifs have captions and alt text.
