

Practice Quiz (H5P) Step

- [Create New Questions](#)
 - [Write Questions](#)
 - [Add Questions to the Platform](#)
 - [Share Questions for Review](#)
- [Skillcrush Question Types](#)

Practice Quizzes offer students a way for students to test their knowledge and understanding immediately after passively learning a topic, through Watch, Read, and/or Download steps. The quizzes give immediate feedback and can be taken over and over again.

The Practice Quizzes are developed using a tool called H5P. H5P is an online tool with interactive "content types" that can be embedded in class pages using the H5P plugin.

Create New Questions

First, you'll want to write the questions in a Google Doc. Writing in a Doc will help you check for spelling, grammar, and punctuation. Plus, it creates a place where others can make suggestions and comments about the questions. After drafting the question, you can then upload them to the platform. With a working quiz, you can share it with others for review.

Write Questions

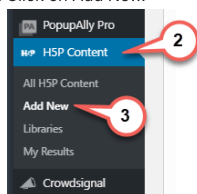

H5P has [over 40 content types](#) to choose from; however, not all [content types are accessible](#). See the [Skillcrush Question Types](#) section for content types that have been implemented successfully in classes.

Start by drafting questions for H5P using the [Practice Quiz Template](#). Templates for specific question types are on the second page of the Doc.

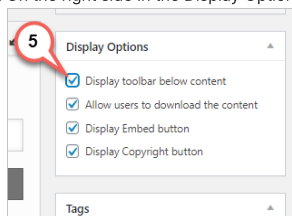

Add Questions to the Platform

After drafting, add the questions to the platform using the H5P plugin:

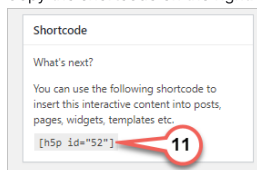

1. Log into the [Admin Panel](#).
2. On the left navigation, look for the H5P Content option.
3. Click on Add New.

4. Search or choose a content type from the list of "All Content Types", like "True/False Question."
5. On the right side in the Display Options panel, **uncheck** the box that says "Display toolbar below content" to prevent extraneous displays around the content.

6. In the Title field, name the question starting with the class number, lesson number, and keywords related to the content. Ex. 102-L06-sunny-cloudy-weather
7. Fill out the question section. Indicate the type of question in bold followed by the instructions in non-bold text. Ex. **MULTIPLE CHOICE:** What are parameters?
8. Complete any answers, feedback, and change behavioural settings (if applicable, see [Skillcrush Question Types](#) section).
9. On the right, click the blue Create button.
10. Test the question to make sure it's correct and the feedback appears as intended.
11. Copy the shortcode on the right. Ex. [h5p id="59"]

12. Edit the class page where the question will appear. Paste the shortcode on the page and press the Update button.

Share Questions for Review

After adding questions to the platform, you can have someone review your work and provide feedback.

1. Copy the link to the page where you embedded the questions.
2. Paste the link to the Quiz in the Google Doc where you drafted the questions. This will enable the reviewer to take the quiz like a student, and identify any errors in the quiz itself, like misplaced feedback.

3. Share the link with the reviewer(s) for feedback.

Skillcrush Question Types

Skillcrush Question Type	H5P Content Type	Description / Use	Feedback Options for Answers	Manual Behavioural Settings	Other Notes
TRUE OR FALSE	True/False Question	Good for questions with binary responses (true/false, yes/no, let/const).	Add a message to each individual answer. Choose to display feedback when the answer is selected or not selected.	None, use defaults.	You can override the "True" and "False" labels in the "Text overrides and translations" settings.
MULTIPLE CHOICE	Multiple Choice	Multiple possible answers, but only one correct answer. Good for testing basic understanding on a topic or a definition.	Add a message to each individual answer. Choose to display feedback when the answer is selected or not selected.	None, use defaults.	<i>none</i>
SELECT ALL THAT APPLY	Multiple Choice	Multiple possible correct answers. Good for identifying patterns or similar applications of concepts or techniques.	Yes, when an answer is selected.	Check box for "Give one point for the whole task." to only give credit for all correct answers. Leave unchecked to give partial credit.	
FILL IN THE BLANKS	Fill in the Blanks	Type in the answer. Excellent for practice writing code. If you ask for a word, place the blank at the end of the sentence.	Add feedback using \+ for a right answer, and \- for a wrong answer.	None, use defaults.	You can't have asterisks in the correct word/phrase.
DRAW & DROP	Drag the Words	Drag words or phrases into a designated space.	Add feedback using \+ for a right answer, and \- for a wrong answer.	None, use defaults.	You can't have asterisks in the correct word/phrase.
MAKE SELECTIONS	Mark the Words	Identify and click on specific words. Great for students identifying typos or patterns.	Add feedback using \+ for a right answer, and \- for a wrong answer.	Uncheck the box next to "Show score points." to only give credit for all correct answers. Leave checked to give partial credit.	Only single words can be selected, not phrases that have spaces. Provide a hint to the number of typos students should look for.
